

Available In White Or Black Hardware As Standard

- Designed and manufactured in the UK, our long established design has proven reliability with long lasting performance.
- A robust, fully integrated system using 32 mm roller blind cassette and side channels with optional bottom channel to reduce light strike between the blind and recess.
- Suitable for blind sizes up to 2.2m wide and 1.83 m drop, dependant on fabric choice. Larger sizes can be accommodated using our other systems.
- Extrusions are aluminium, powder coated to either white or black finish as standard. Custom hardware to a RAL colour available at additional cost.
- Light exclusion is most effective with black hardware and fabric. A silicone sealant should be applied to channels and top box to prevent light bleed around edges.
- Recess top fixing uses spring clip brackets, side recess fixing is through box end caps and side channels.
- Side winder chain operation with option of either plastic or metal chain in a range of colours. Safety chain breaks will be fitted as standard, however a continuous metal chain can be used but this subject to safety regulations. Please contact us for further information on safety.
